

Shinas Aman PK

Python Full Stack Developer

+91 9207167218 | shinasamanpk@gmail.com
LinkedIn | GitHub | LeetCode

Professional Summary

Python Full Stack developer specializing in **microservice architecture, async pipelines, and high-concurrency systems**. Shipped multiple production platforms across real-time communications, edtech, and fintech from system design to deployment.

Technical Skills

Backend: Python, FastAPI, Django, DRF, Django Channels, Flask, RabbitMQ, Redis, Celery, Pydantic, Web3.py

Architecture: SOLID principles, Clean Architecture, REST design, asynchronous systems, event-driven design, microservices, distributed service synchronization

Frontend & Integrations: React.js, Redux, Tailwind CSS, Bootstrap, Socket.IO, Agora, Stripe, Razorpay, Firebase FCM, Sentry

Databases: PostgreSQL, MongoDB, Firebase, MinIO, AWS S3

Cloud & DevOps: AWS EC2, Docker, GitHub Actions, Nginx

AI & Testing: OpenAI API, LangChain, RAG pipelines, Pytest, Postman, K6, SonarQube

Professional Experience

Sr. Software Engineer — Simplicitylabs, Gurugram **Apr 2025 – Present**

- Built a **multi-chain crypto exchange** supporting BTC, ETH, Polygon, and BSC, including an off-chain order book matching engine, custodial wallet system, and real-time WebSocket orderbook with Redis caching
- Designed and shipped microservice-based systems using **Django, FastAPI, and RabbitMQ**, improving service modularity, fault isolation, and independent deployability
- Implemented asynchronous task pipelines with **Celery** and **Redis** to handle high-concurrency workloads and background job processing
- Tuned **PostgreSQL** indexes and Redis caching layers to measurably reduce query latency; containerized services with **Docker** and validated performance under load using **k6**

Freelance Backend Developer — Zartek, Kochi **Jan 2025 – Mar 2025**

- Rewrote the existing **Django backend to FastAPI** for a real-time internet calling platform connecting customers and agents, improving throughput and reducing latency under concurrent load
- Built a **pluggable multi-gateway payment system** switchable via config, and integrated **Agora SDK** for audio/video calling with auto-disconnect
- Designed a **coin-based wallet system** with per-second call deductions, recharge plans, referral bonuses, OTP via WhatsApp, and **Firebase FCM** push notifications

Software Developer & Bootcamp Mentor — Brototype, Kerala **Jan 2024 – Dec 2024**

- Mentored junior developers on backend and full-stack development, covering real-world patterns in Django, REST APIs, and microservices
- Conducted code reviews and debugging sessions focused on writing production-quality, maintainable code
- Led technical discussions on clean architecture and system design, helping trainees close the gap between bootcamp learning and industry expectations
- Built real-world full-stack projects in a collaborative environment and actively shared technical knowledge with peers

Key Projects

Language Learning Platform [GitHub](#)

Interactive platform connecting students with tutors through live sessions and real-time communication.

- Integrated **Socket.IO** for community discussions and **Agora** for live video sessions
- Implemented secure **Stripe** payments and authentication using **JWT** and **OAuth**
- Built a responsive frontend with **React, Tailwind CSS, and Framer Motion**
- Set up CI/CD using **GitHub Actions**, enforced code quality via **SonarQube**, and deployed Dockerized services on **AWS EC2**

Tech Stack: Django, React, PostgreSQL, Agora, Stripe, Docker, EC2, SonarQube, Pytest

Education

Diploma in Computer Engineering **2020 – 2023**

JDT Islamic Polytechnic College, Kerala
